

MOLAR CONVERSIONS

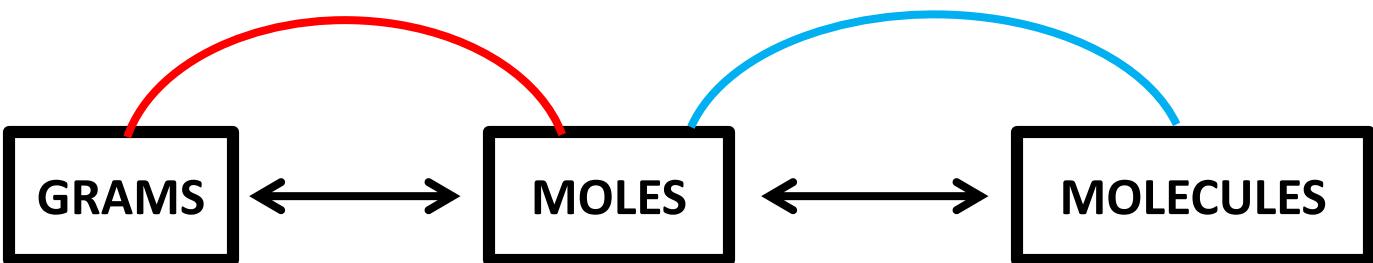

MOLAR CONVERSIONS

Conversions related to moles

Use
Molar Mass

Use
Avogadro's #

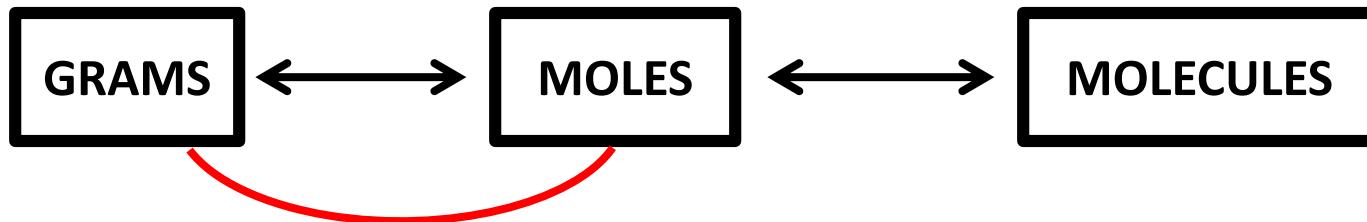

$$\frac{X \text{ grams}}{1 \text{ mole}}$$

$$\frac{6.02 \times 10^{23} \text{ molec.}}{1 \text{ mole}}$$

Moles → Grams

How many grams does 1.7 moles of NaCl weigh?

Use Molar Mass

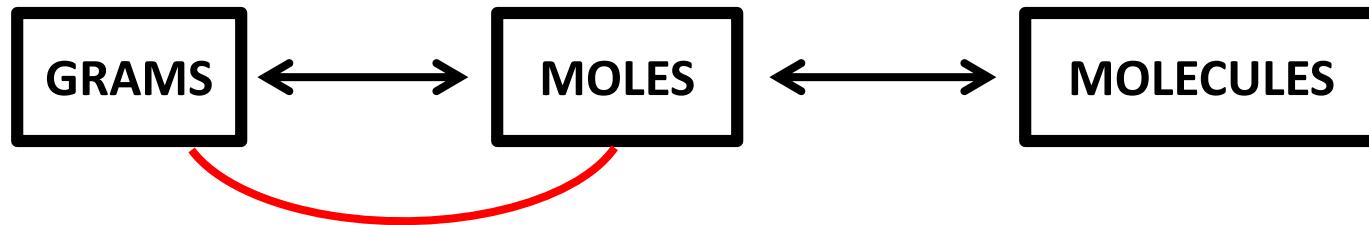

$$\begin{aligned} \text{mm} &= (22.99) + (35.45) \\ &= \mathbf{58.44 \text{ g/mol}} \end{aligned}$$

1.7 moles	58.44 g
	1 mol

$$= \mathbf{99.35 \text{ g}}$$

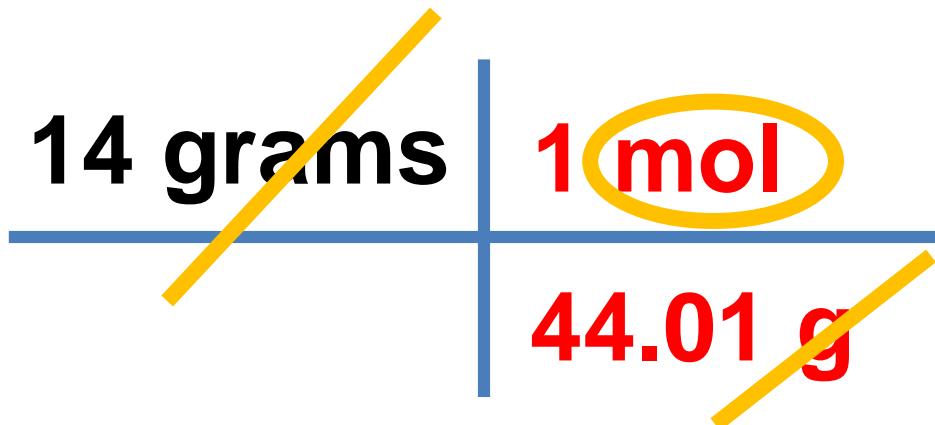

Grams → Moles

How many moles are in 14 g of CO₂?

Use Molar Mass

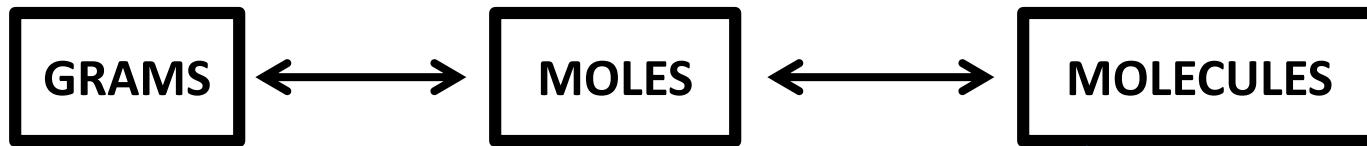

$$\begin{aligned} \text{mm} &= (12.01) + (2 \times 16.00) \\ &= 44.01 \text{ g/mol} \end{aligned}$$

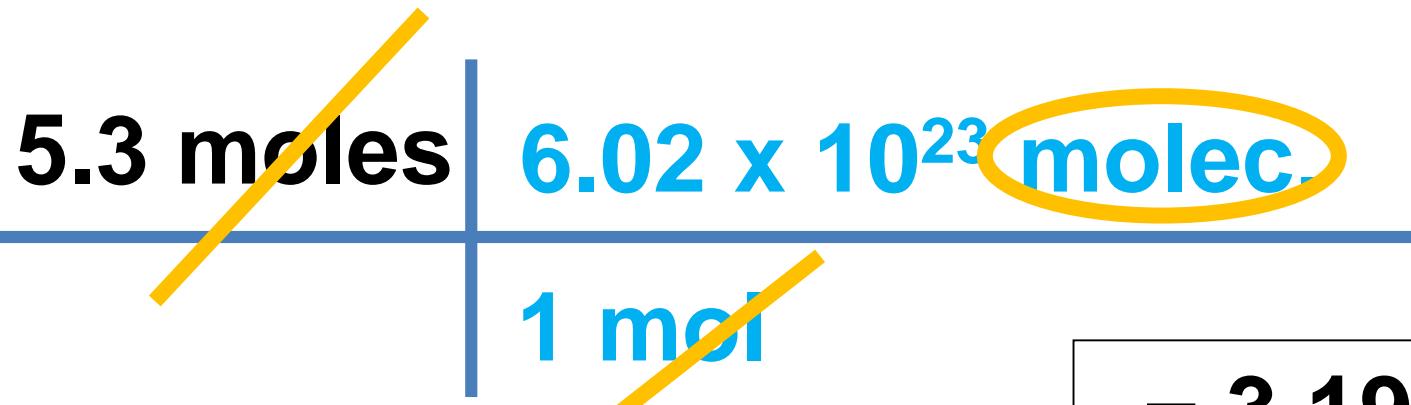

$$= 0.32 \text{ mol}$$

Moles → Molecules

How many molecules are in 5.3 moles of H₂O?

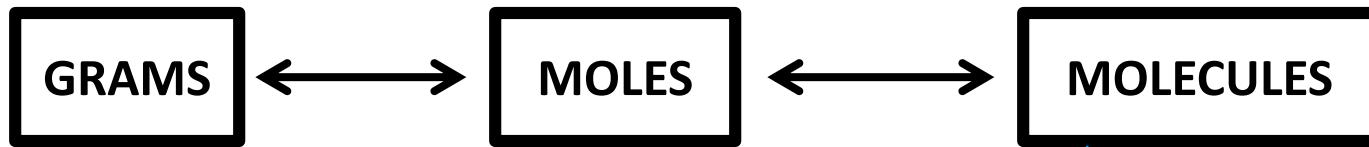

Use Avo.'s # 6.02×10^{23} molec./mol

$$= 3.19 \times 10^{24} \text{ molecules}$$

Molecules → Moles

How many moles are in 3.17×10^{43} molecules?

Use Avo.'s #

6.02×10^{23} molec./mol

~~3.17×10^{43}
molec.~~

1 mol

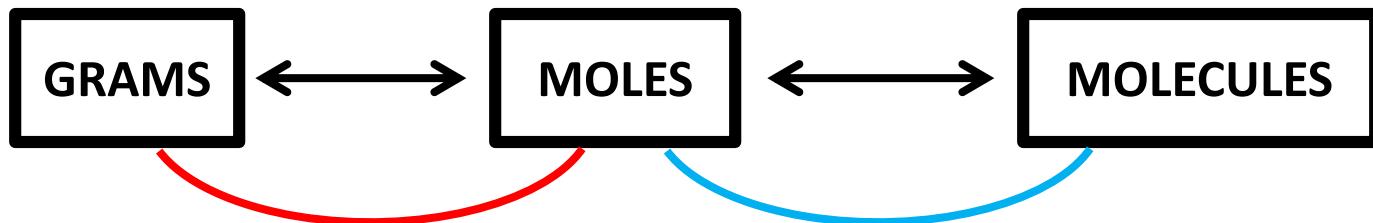

= 5.27×10^{19}
moles

(6.02×10^{23})
~~molec.~~

*Use
parenthesis!!!!*

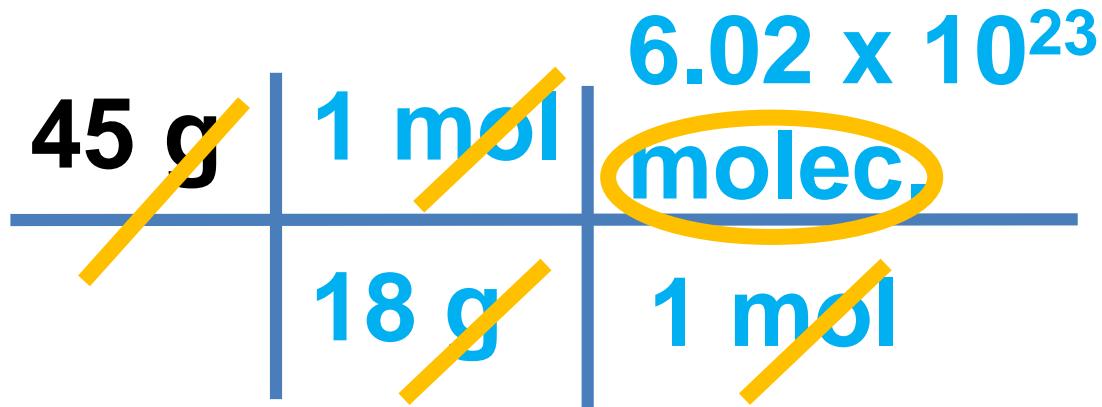

Grams → Molecules

How many molecules are in 45 grams of H₂O?

Use Molar Mass = 18.02 g/mol

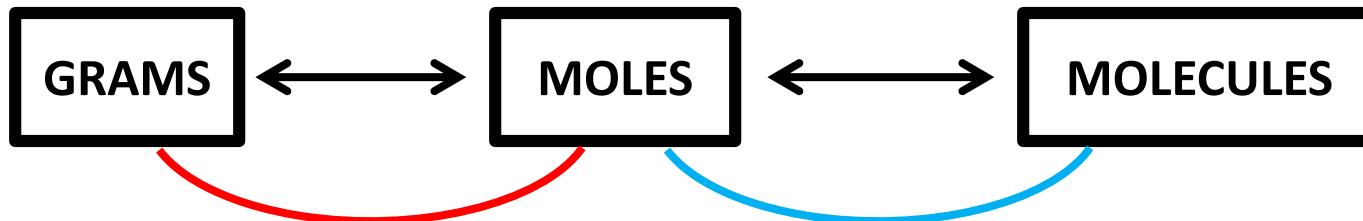

Use Avogadro's #

$$= 1.51 \times 10^{24} \text{ molecules}$$

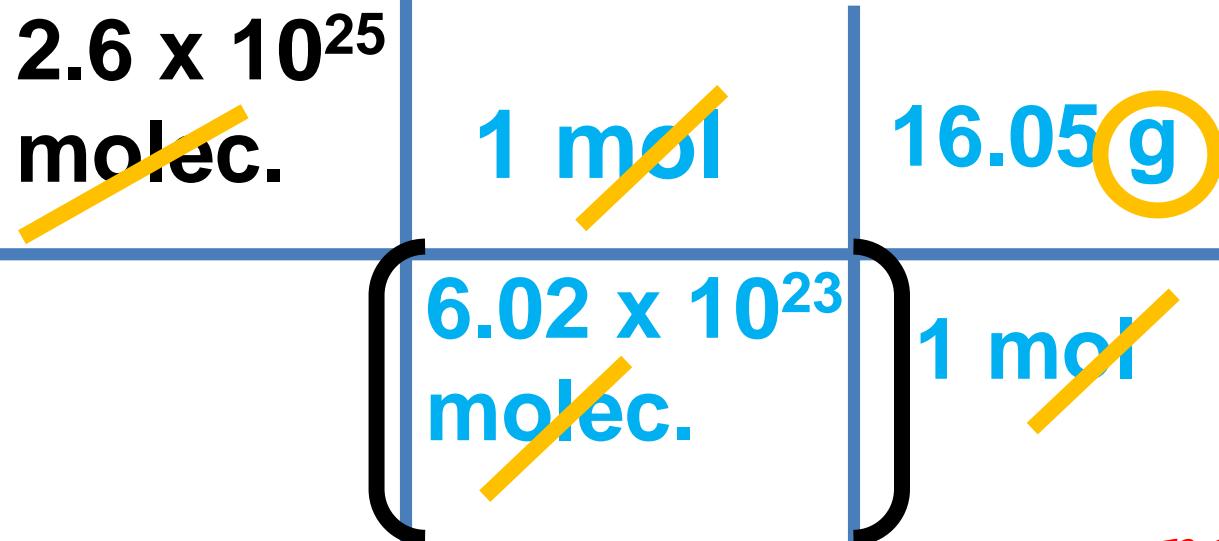

Molecules → Grams

How many grams in 2.6×10^{25} molecules of CH₄?

Use Molar Mass = 16.05 g/mol

Use Avogadro's # = 6.02×10^{23} molec./mol

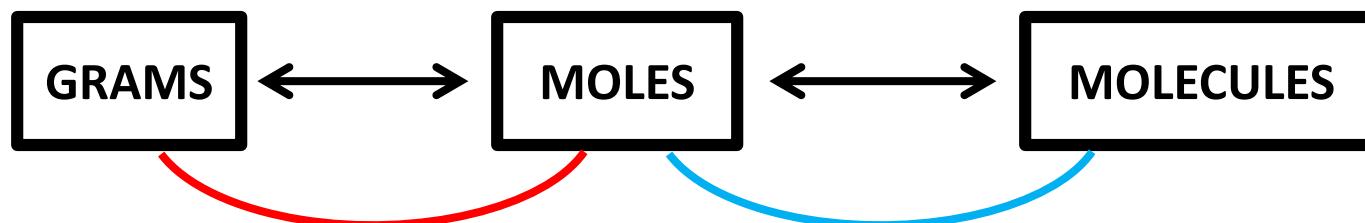

$$= 693.19 \text{ grams}$$

Use
parenthesis!!!

REMEMBER!

You can use “particles” instead of molecules to be generic! Counting atoms? Use atoms! Still 6.02×10^{23}

Use Molar Mass
= 16.05 g/mol

Use Avogadro's #
= 6.02×10^{23} molec./mol
