Classroom Scavenger Hunt

Directions:

This assignment is to introduce you to where things are in the classroom, and to teach you some of the procedures we will use in the classroom this year. Your teacher will assign you a partner and you will be given a question number to start with. We will all start with a different number so we hopefully don't end up with a traffic jam! You will need to run around the room quickly finding the various items, or answers to questions. You are expected to know all the items and information covered here!

- Follow the instructions to find the correct location in the room.
- When you find the correct location there will be a piece of yellow paper in the location with a description and a number. This number is to verify that you found the right place!
- Read the yellow paper, then answer the question related to the location you went to.

Instructions	# on yellow paper	Question and Answer Answer
1. Find the place where the class calculators are kept. Check pocket #5 for the yellow paper.		What is the model number of the calculator we will be using?
2. Find the Fume Hood by the front door – read the yellow paper taped to the front.		Where should the sash be when using the fume hood?
