

VOCAB CAR

- Using colored paper cut out two copies of a car shape (don't forget things like wheels! See example below for a good size to use)
- Turn your paper Landscape direction.
- Glue one car down on the bottom of the Landscape paper.
- Glue the other car on top as a FLIPPY.
- On the outside of the flippy go all the words/terms/phrases that you have learned in the unit.
- On the inside go definitions.
- Draw a little road scene around the car (draw in the pavement, horizon, signs, etc).
- You must draw at least one ROAD SIGN on your picture that makes a pun, or joke relating to the Kinetics or Equilibrium unit.
