# **Periodic → Periodic Law → Periodic Table**

- Periodic occurs at regular, predictable intervals
- Periodic law - physical and chemical properties of the elements are periodic - By atomic number!
- Periodic Table of Elements - arranged by atomic number - shows patterns in properties

# Element

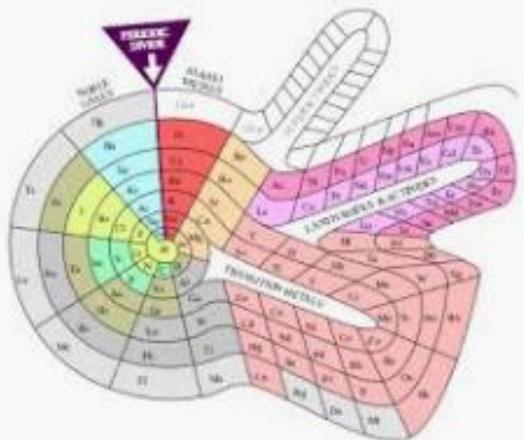

- A pure substance - one kind of atom
  - Cannot be broken down into simpler substances
- 90 occur naturally on earth
- 25 were synthesized (made) by scientists

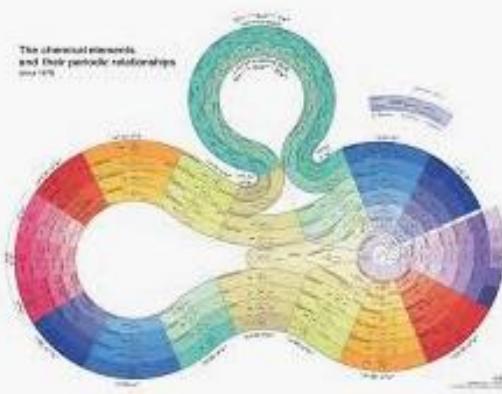

# There are tons of periodic tables out there!

---

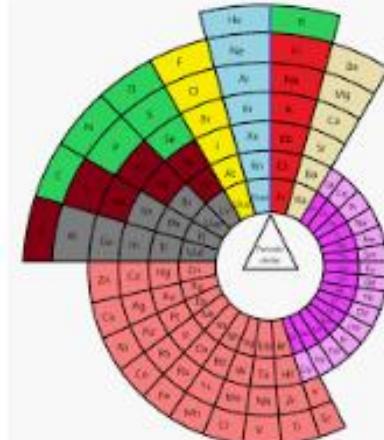

- A periodic table is just a way to organize the elements to try and show various patterns
- The periodic table we are used to is just the most commonly used one, not the only one! Some are trying to show different patterns than we are usually using

# Dmitri Mendeleev

- 1860's
- Grouped elements according to atomic masses and properties

Image taken from:

<http://jscms.jrn.columbia.edu/cns/2006-04-18/fido-luxuriantflowinghair/mendeleev/>

# Mendeleev's Published Periodic Table of Elements

Ueber die Beziehungen der Eigenschaften zu den Atomgewichten der Elemente. Von D. Mendeleeff. — Ordnet man Elemente nach zunehmenden Atomgewichten in verticale Reihen so, dass die Horizontreihen analoge Elemente enthalten, wieder nach zunehmendem Atomgewicht geordnet, so erhält man folgende Zusammenstellung, aus der sich einige allgemeinere Folgerungen ableiten lassen.

H = 1		Ti = 50	Zr = 90	? = 180
	Be = 9,4	V = 51	Nb = 94	Ta = 182
	B = 11	Cr = 52	Mo = 96	W = 186
	C = 12	Mn = 55	Rh = 104,4	Pt = 197,4
	N = 14	Fe = 56	Ru = 104,4	Ir = 198
	O = 16	Ni = 59	Pd = 106,6	Os = 199
	F = 19	Co = 59	Ag = 108	Hg = 200
	Li = 7	Cu = 63,4	Cd = 112	
	Na = 23	Zn = 65,2	Ur = 118	Au = 197?
		Al = 27,4	? = 68	
		Si = 28	? = 70	Sn = 118
		P = 31	As = 75	Sb = 122
		S = 32	S = 79,4	Te = 128?
		Cl = 35,5	I = 80	J = 127
		K = 39	Rb = 85,4	Cs = 133
		Ca = 40	Si = 87,6	Tl = 204
		? = 45	Ge = 92	Pb = 207
		?Er = 56	La = 94	
		?Yt = 60	D = 95	
		?In = 73,6	Th = 118?	

1. Die nach der Grösse des Atomgewichts geordneten Elemente zeigen eine stufenweise Abänderung in den Eigenschaften.
2. Chemisch-analoge Elemente haben entweder übereinstimmende Atomgewichte (Pt, Ir, Os), oder letztere nehmen gleichviel zu (K, Rb, Cs).
3. Das Anordnen nach den Atomgewichten entspricht der *Werthigkeit* der Elemente und bis zu einem gewissen Grade der Verschiedenheit im chemischen Verhalten, z. B. Li, Be, B, C, N, O, F.

Why do you think there are question marks here?

# Mendeleev's Predictions

- Mendeleev's Table had missing elements or gaps," BUT he was able to predict the characteristics of these missing elements because of Periodic Law.

<u>"Ekasilicon"</u> <u>Prediction</u>		<u>Germanium</u> <u>Actual</u>	
Date Predicted	1871	Date Discovered	1886
Atomic Mass	72	Atomic Mass	72.6
Density	5.5 g/cm <sup>3</sup>	Density	5.47 g/cm <sup>3</sup>
Bonding Power	4	Bonding Power	4
Color	Dark Gray	Color	Grayish White

Notice how Mendeleev's predictions (orange column) were very accurate when compared to Germanium's actual characteristics (green column)

# Henry Moseley

- 1914
- Rearranged the elements by **atomic numbers**
- He determined # protons = atomic #
- The periodic table we use today!

Image taken from:  
<http://dewey.library.upenn.edu/sceti.smith/>

# 3 Classes of Elements

	1																		
1	1 H 1.008	2

# Metals

Chemical Prop.	Physical Prop.
Few electrons in VALENCE shell (outer shell)	Ductile Malleable
Lose electrons easily	Good conductors
POSITIVE charge $\text{Ca}^{2+}$	Shiny
Make Cations	Solid at room temp

79  
Au  
196.967

11  
Na  
22.990

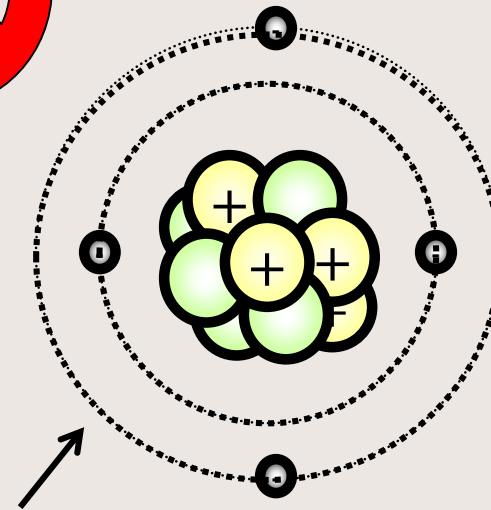

What metal is not a solid @ room temperature?

# Atoms with Few Electrons in their Outer Energy Level

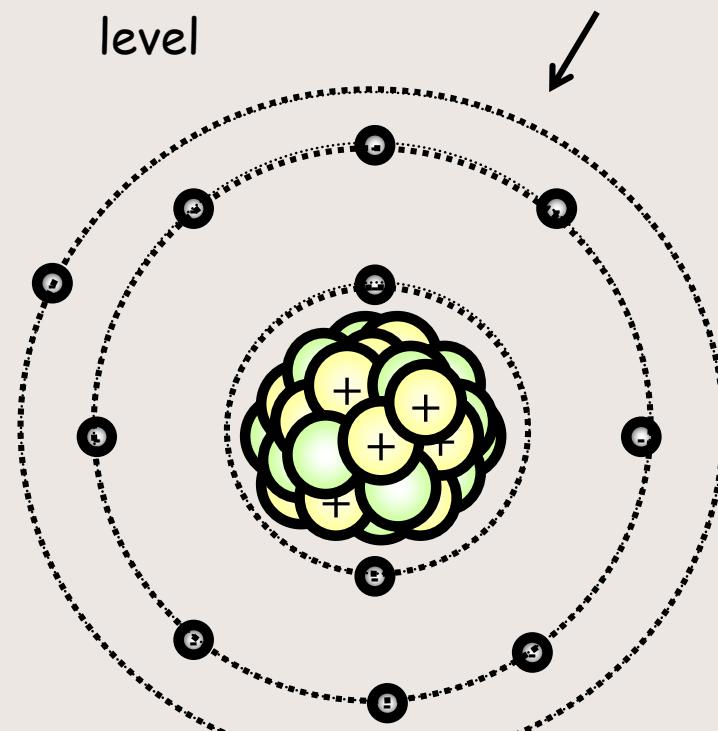

4  
Be  
9.012

Notice: only  
2 electrons  
in outer level

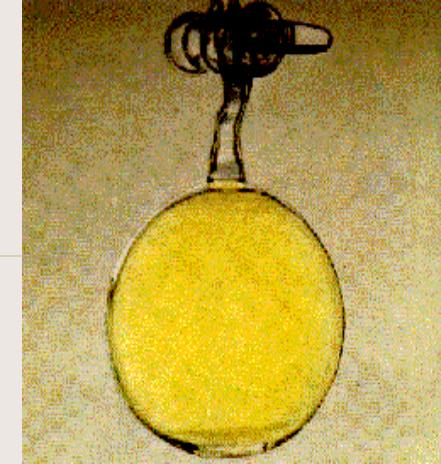

Notice: only 1  
electron in outer  
level

11  
Na  
22.990

# Non-Metals

Chemical Prop.	Physical Prop.
Almost full, or totally full valence shell	NOT Ductile NOT malleable
Tend to gain electrons	BAD conductors
NEGATIVE charge $N^{3-}$	Mostly solid
Make ANIONS	Some are gas at room temp

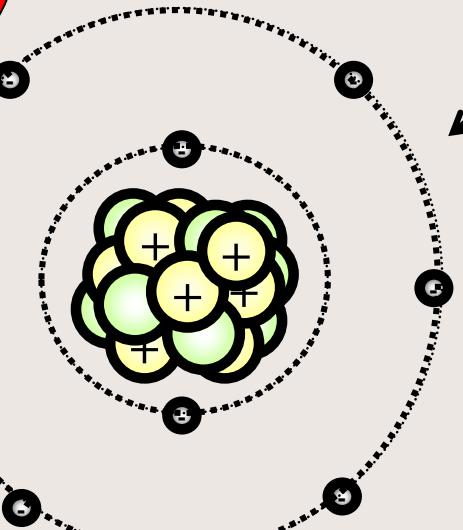

17  
Cl  
35.453

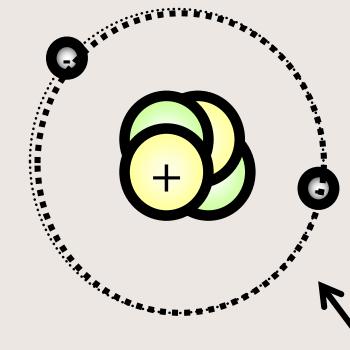

16  
S  
32.066

# Atoms with Full or Almost Full Outer Energy Level

8  
O  
15.999

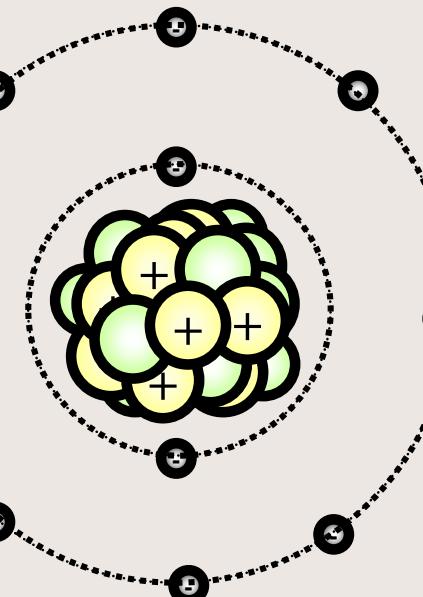

Notice: 2  
electrons in  
outer level -  
FULL

2  
He  
4.003

Notice: 6  
electrons in  
outer level -  
almost full

9  
F  
18.998

Notice: 7  
electrons in  
outer level -  
almost full

# Metalloids (Semi-metals)

Chemical Prop.	Physical Prop.
<b>Most have half full valence shell</b>	<b>Have properties of metals AND non-metals</b>
<b>Make anions OR cations depending on their environment</b>	<b>No way to know which properties of each</b>

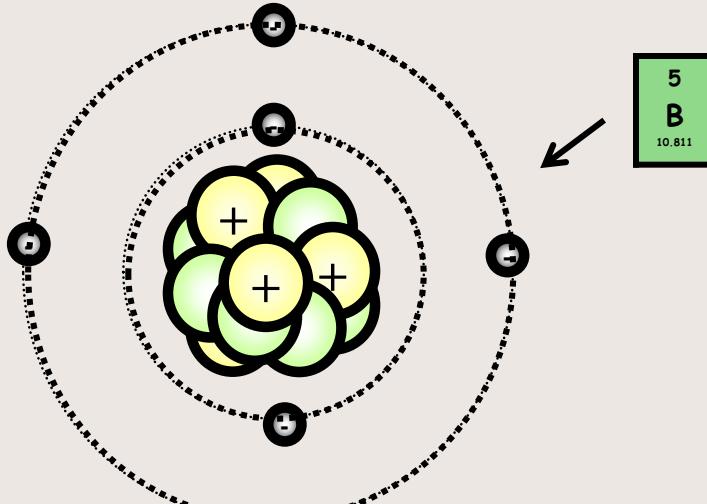

14  
Si  
28.086

5  
B  
10.811

# Atoms with $\sim\frac{1}{2}$ Complete Outer Energy Level

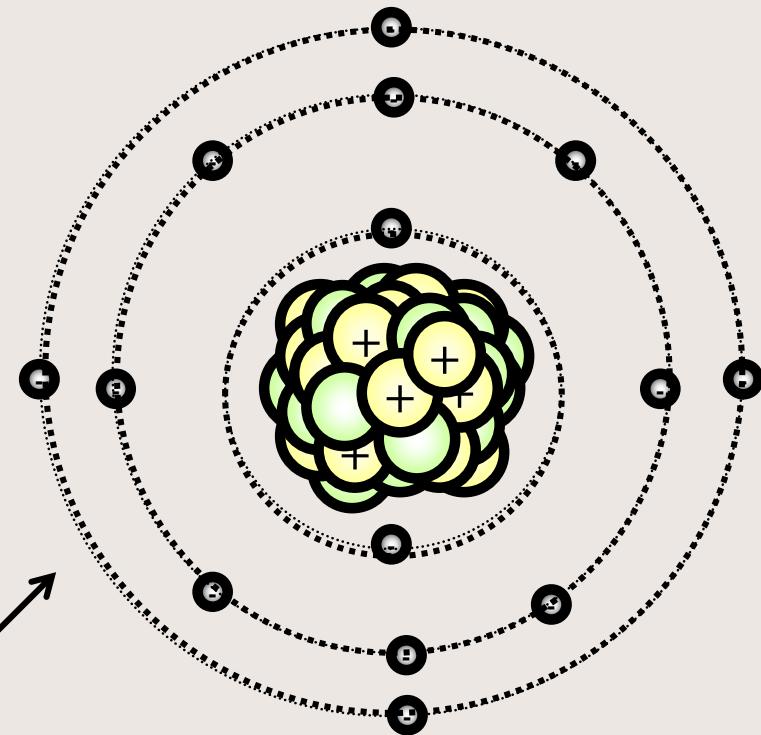

Notice: only 3 electrons in outer level

5  
B  
10.811

Notice: only 4 electrons in outer level

14  
Si  
28.086

How many periods (rows) are on the Periodic Table Of Elements?

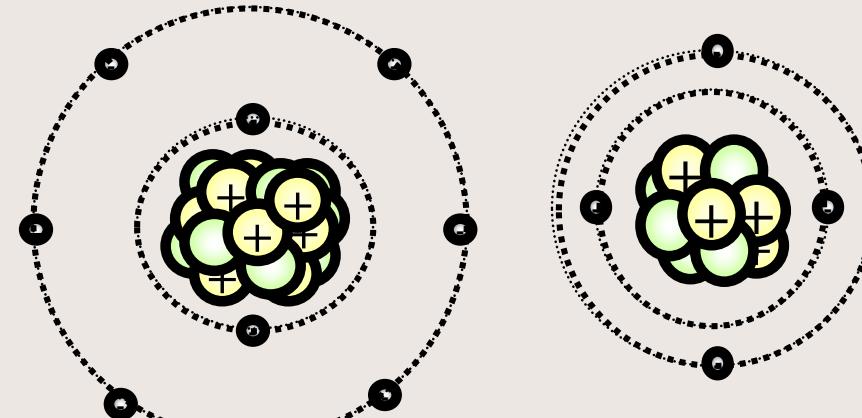

# Period Properties

---

- Seven periods (numbered from the top down)
- Atomic #'s and masses increase as you move from the left to the right in a period
- All elements in the same period have the same number of energy levels
  - Period 1 = 1 energy level
  - Period 2 = 2 energy levels
  - Period 3 = 3 energy levels
  - Etc...

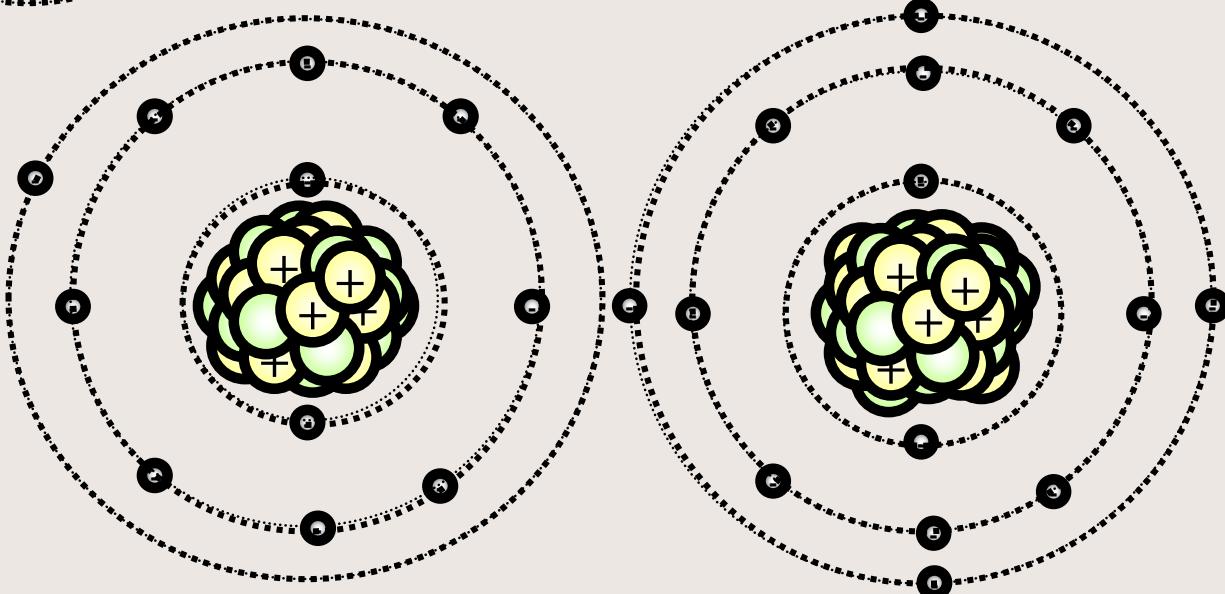

## Examples of Period elements having the same number of energy levels in their atoms

In what period do you think these atoms reside?

In what period (row) do you think these atoms reside?

# Important Features of the Periodic Table: Group (Family)

- each column of elements on the periodic table

How many groups (families) are on the Periodic Table Of Elements?

FROM TOP TO BOTTOM OR BOTTOM TO THE TOP

# Group (Family) Properties

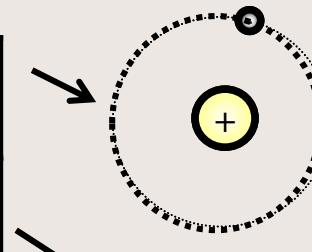

- 18 groups (numbered from left to right)
- Atomic # and masses increase from the top down
- Atoms in same group have same number of valence electrons  
Exceptions: d block and f block
- similar physical and chemical properties  
BECAUSE THEY HAVE THE SAME NUMBER OF VALENCE ELECTRONS

# Examples of Group Elements with the same # of valence electrons

How many electrons do each of these atoms have in their outer orbital/level?

1	H	1.008
3	Li	6.941
11	Na	22.990
19	K	39.098
37	Rb	85.468
55	Cs	132.905
87	Fr	(223)

What group (family) do these elements reside in?
