

## Naming Triangles

You will make a large triangle built out of small triangles. When two edges of the triangles touch their names and formulas should be correct pairings. The outside edge of the large triangle should all be incorrect names and formulas. When you think you have built your triangle correctly please call your teacher over to check and stamp your paper:

*Teacher Stamp*

Please take a photo of your triangle once you have your stamp in case you run out of time in class to finish the worksheet portion of this activity. If you cannot take a photo, please have someone else in class take it for you and email it to you.

Pick ten IONIC formulas and complete the chart below and on the back of the paper. Show the crossing over used to get the neutral formula.

Name	Neutral Formula and Crossing Over Work

<b>Name</b>	<b>Neutral Formula and Crossing Over Work</b>
