

Class Copy! Do NOT take! If you need to see it again you can find it on the class website notebook tab!

Dear Students,

I'm so sorry I had to be gone again! I need you to take the notes in this packet – they go on page 187 and are KCQ. Your target is: *I can use the mole ratio to convert from moles of one substance to moles of another substance.* **PLEASE** make sure to **LEARN** from the notes, not just copy them like a robot! ☺ When you are done please attempt the mole ratio worksheet – it goes on p. 186. Use pencil! Focus on the idea that this is just dimensional analysis! You are just learning a new conversion factor! You get your numbers for this new conversion factor from the balanced equation.

Email me if you need to!

Mrs. Faurel

STEPS

- know ions
- write formulas
- cross over
- find conversion factors
- Dim. Analysis
- units

The Mole Ratio
in Stoichiometry

How much do I
have, need or
make?

* the mole ratio!

$$1 \text{ mol H}_2\text{O} = 2 \text{ mol H} = 1 \text{ mol O}$$

$$2 \text{ mol H}_2\text{O} = 4 \text{ mol H} = 2 \text{ mol O}$$

$$3 \text{ mol H}_2\text{O} = 6 \text{ mol H} = 3 \text{ mol O}$$

$$2.5 \text{ mol H}_2\text{O} = 5 \text{ mol H} = 2.5 \text{ mol O}$$

1:2:1

2:4:2

3:6:3

2.5:5:2.5

1:2:1

The ratio never changes!

conversion factors!

$$\frac{1 \text{ mol H}_2\text{O}}{2 \text{ mol H}}$$

$$\frac{1 \text{ mol H}_2\text{O}}{1 \text{ mol O}}$$

$$\frac{2 \text{ mol H}}{1 \text{ mol O}}$$

moles A : moles B

$$\frac{\text{moles A}}{\text{moles B}}$$

$$\frac{\text{moles B}}{\text{moles A}}$$

mole ratios are

the key to
stoichiometry!

Q: Find all the mole ratios for $\text{B}_2(\text{CO}_3)_3$

$$\frac{2 \text{ mol B}}{1 \text{ mol } \text{B}_2(\text{CO}_3)_3}$$

$$\frac{3 \text{ mol C}}{1 \text{ mol } \text{B}_2(\text{CO}_3)_3}$$

$$\frac{9 \text{ mol O}}{1 \text{ mol } \text{B}_2(\text{CO}_3)_3}$$

$$\frac{2 \text{ mol B}}{3 \text{ mol C}}$$

$$\frac{2 \text{ mol B}}{9 \text{ mol O}}$$

$$\frac{3 \text{ mol C}}{9 \text{ mol O}}$$

NEVER
reduce a
mole ratio!

Q: Find all the mole ratios for $\text{Ca}(\text{NO}_3)_2$

$$\frac{1 \text{ mol Ca}}{1 \text{ mol } \text{Ca}(\text{NO}_3)_2}$$

$$\frac{2 \text{ mol N}}{1 \text{ mol } \text{Ca}(\text{NO}_3)_2}$$

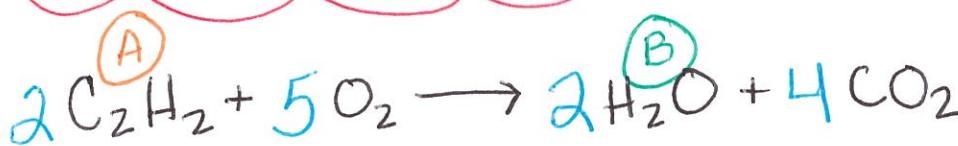

$$\frac{6 \text{ mol O}}{1 \text{ mol } \text{Ca}(\text{NO}_3)_2}$$

$$\frac{1 \text{ mol Ca}}{2 \text{ mol N}}$$

$$\frac{2 \text{ mol N}}{6 \text{ mol O}}$$

$$\frac{1 \text{ mol Ca}}{6 \text{ mol O}}$$

mole ratios using reactions

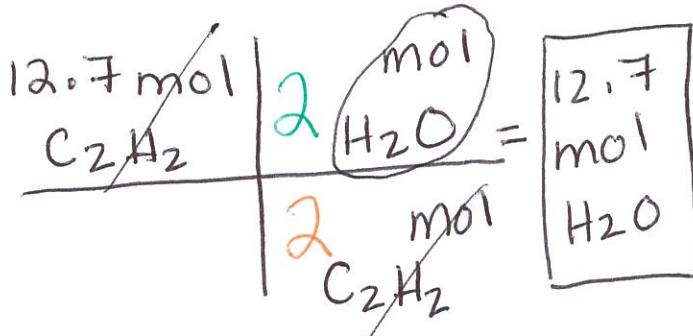

① How many moles of water can you make if you start with 12.7 moles of C_2H_2 ?

A = Known

B = Unknown

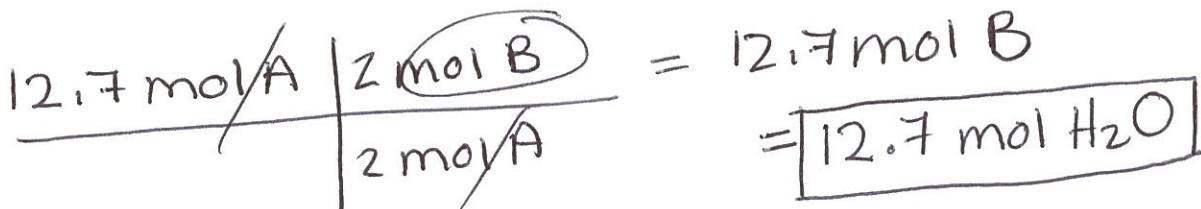

$\text{mol A} \rightarrow \text{mol B}$

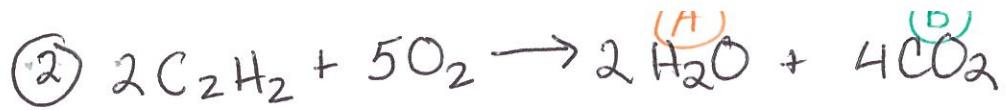

mole ratio = conversion factor

$\frac{\# \text{ mol B}}{\# \text{ mol A}}$ } #'s are always
the coefficients

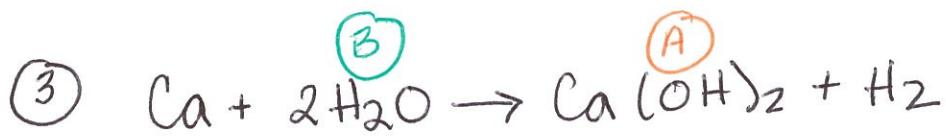

- OR -

you made 17.3 moles of water. How many moles of carbon dioxide did you make?

$$\frac{17.3 \text{ moles A}}{2 \text{ mole A}} \left| \begin{array}{c} 4 \text{ mole B} \\ \hline \end{array} \right. = 34.6 \text{ mol B}$$
$$= \boxed{34.6 \text{ mol CO}_2}$$

$$\text{mole ratio} = \frac{2 \text{ mol B}}{1 \text{ mol A}}$$

$$\frac{15 \text{ mol A}}{1 \text{ mol A}} \left| \begin{array}{c} 2 \text{ mol B} \\ \hline \end{array} \right. = 30 \text{ mol B}$$
$$= \boxed{30 \text{ mol H}_2\text{O}}$$
