### **More Practice with Phase Changes**

- 1. Calculate the energy absorbed when 8.5g of ice is melted at 0.0°C.
- 2. Calculate the energy released when 2.2g of water vapor condenses on a soda can at 100.0°C.
- 3. Calculate the energy absorbed when 89.3g of water is boiled at 100.0°C.
- 4. Calculate the energy released when 20.0g of water forms an ice cube in a freezer at 0.0°C.
- 5. Calculate the energy needed to evaporate 400.0g water from an ocean to form water vapor.
- 6. How much energy is required to heat 25g of liquid water from 25°C to 100.0°C and change it to steam at 100.0°C.
- 7. Calculate the energy released when 14g of liquid water lowers from 14°C to 0.0°C and then freezes at 0.0°C.
- 8. Calculate the energy absorbed when 12g of liquid water raises from 55°C to 100.0°C and then boils at 100.0°C.
