1)	If I make a solution by adding 83 grams of calcium hydroxide to 750 mL of water, What is the molarity of calcium hydroxide in this solution?
2)	If I make a solution by adding water to 35 mL of methanol (CH ₃ OH) until the final volume of the solution is 275 mL, What is the molarity of methanol in this solution? (The density of methanol is 0.792 g/mL)
