

Name: _____

Period: _____

Seat#: _____

Directions:

This worksheet is not intended to be done in one night! You will have a couple days to work on it. Do some each night! The intention of this assignment is to make sure that you are *really* "solid" in your formulas so that you are not slowed down as we proceed into the new AP Chem material. This is the equivalent of learning your alphabet so you can write a five page essay in a timed write setting. If you don't know your alphabet you can't write words, sentences, paragraphs, or your five page essay!

In each blank:

- Write the balanced chemical equation for the dissolution in water of this ionic compound
- Highlight or circle the side that is predominant in a 1 M solution (use solubility rules!). If the reactant is not soluble (or somewhat soluble) then you would highlight the reactant side. If the reactant is soluble then highlight the product side.
- If compound is a metal oxide or metal hydride, write the appropriate reaction with water, not a dissociation.
$$\text{MO} + \text{H}_2\text{O} \rightarrow \text{M}(\text{OH}) \qquad \text{MH} + \text{H}_2\text{O}(\text{l}) \rightarrow \text{M}(\text{OH}) + \text{H}_2(\text{g})$$
- Here is a link to the solubility rules →

<https://tinyurl.com/yau4dlfx>

1) Zinc iodide
2) Potassium phosphate
3) Magnesium nitrate $\text{Mg}(\text{NO}_3)_2 (\text{s}) \rightarrow \text{Mg}^{2+} (\text{aq}) + 2\text{NO}_3^- (\text{aq})$
4) Lithium hydride
5) Calcium carbonate
6) Manganese (II) sulfide
7) Manganese (IV) hydride
8) Aluminum oxide
9) Sodium cyanide
10) Manganese (II) sulfate

11) Ammonium sulfide

12) Copper (III) oxide

13) Iron (II) chloride

14) Barium oxide

15) Calcium phosphate

16) Mercury (II) chloride

17) Calcium hydroxide

18) Sodium chromate

19) Aluminum nitrate

20) Potassium bromate

21) Cesium oxide

22) Cobalt (II) chloride

23) Zinc sulfide

24) Iron (II) nitrate

25) Sodium hypochlorite

Extras to Practice – You can (and will) be assigned some of these occasionally. They can (and will) show up on homework, pop quizzes, quizzes, tests, and the AP test.

26) Lithium nitride	57) Calcium hydroxide	87) Lithium bromide
27) Barium chloride	58) Iron (II) oxide	88) Potassium sulfite
28) Zinc hydroxide	59) Nickel (II) chloride	89) Potassium permanganate
29) Nickel (II) nitrate	60) Cobalt (II) nitrate	90) Ammonium thiocyanate
30) Potassium dihydrogen phosphate	61) Ammonium nitrate	91) Sodium oxalate
31) Magnesium oxide	62) Lead (II) carbonate	92) Sodium sulfide
32) Lithium oxide	63) Barium nitrate	93) Lithium carbonate
33) Silver chloride	64) Nickel (II) sulfate	94) Sodium chloride
34) Barium acetate	65) Copper (II) chloride	95) Potassium oxide
35) Sodium bromide	66) Tin (II) nitrate	96) Copper (II) sulfate
36) Sodium phosphate	67) Potassium hydrogen carbonate	97) Copper (II) sulfide
37) Calcium chloride	68) Strontium oxide	98) Magnesium carbonate
38) Calcium oxide	69) Potassium dihydrogen phosphate	99) Potassium bromide
39) Strontium nitrate	70) Iron (II) sulfite	100) Hydrogen peroxide
40) Calcium sulfite	71) Copper (II) oxide	101) Potassium thiocyanate
41) Sodium hydrogen carbonate	72) Sodium hydride	102) Manganese (IV) oxide
42) Sodium dichromate	73) Potassium sulfate	103) Copper (II) nitrate
43) Potassium iodate	74) Hydrogen chloride	104) Sodium chromate
44) Calcium fluoride	75) Nickel (II) bromide	105) Iron (III) oxide
45) Sodium fluoride	76) Strontium chloride	106) Ammonium carbonate
46) Iron (III) nitrate	77) Magnesium iodide	107) Barium hydroxide
47) Lead (II) acetate	78) Sodium acetate	108) Ammonium sulfate
48) Aluminum sulfate	79) Hydrogen iodide	109) Ammonium chloride
49) Potassium dichromate	80) Potassium carbonate	110) Potassium chlorate
50) Sodium sulfate	81) Iron (III) chloride	111) Sodium oxide
51) Lithium hydrogen carbonate	82) Sodium iodide	112) Potassium iodide
52) Sodium hydroxide	83) Lead (II) nitrite	113) Tin (II) chloride
53) Sodium permanganate	84) Hydrogen sulfide	114) Aluminum hydroxide
54) Sodium sulfite	85) Potassium hydroxide	115) Iron (III) sulfate
55) Zinc carbonate	86) Silver nitrate	116) Zinc nitrate
56) Calcium acetate		

Acid Naming

Acid naming is not always taught in all Honors Chem classes. If you need a tutorial on naming acids please see a brief overview here, or use Google...you have a world of info at your fingertips! Get used to using it! ☺

<https://tinyurl.com/yd3zrord>

1) Hydrofluoric acid	2) Phosphoric acid	3) Sulfuric acid
4) Nitric acid	5) Hydrobromic acid	6) Oxalic acid
7) Formic acid	8) Nitrous acid	9) Hydroiodic acid
10) Acetic acid	11) Hydrochloric acid	12) Find one more acid not on this list, name it and write the formula.

Organic Compound Formulas

Naming organic compounds gets really tricky, really fast. We will not be covering much of this topic, but you should look up these commonly seen organic compounds on Google, so you start to notice some patterns. Try to look for the formula as well as the shape. The shape of the molecules may have some patterns to them. What do you notice about the prefix and the suffix of the compounds? Are there patterns? Noticing patterns like this can speed things up for you a lot during the year – it is a skill you should practice!

1) Ethanoic acid	2) Ethanol	3) Methanoic acid
4) Hexane	5) Butanol	6) Propane
7) 1-propanol	8) Ethanol	9) Ethane
10) Methane	11) Propene	12) Benzene
13) Propanoic acid	14) Dimethyl ether	15) Ethyne (acetylene)

Molecular Compounds

It is VERY important to know how to draw good Lewis Structures! It is one of the most frequently missed Honors Chem topics not because it is inherently difficult, but because people won't follow the steps! PLEASE use my method for drawing Lewis Structures because it will work every time! There is an overview of the steps below, but if you need more review please consider watching my YouTube lectures on this topic. Links are below.

Steps to Draw Lewis Dot Structures	Exceptions to the Octet Rule
<ol style="list-style-type: none">1) Count and sum valence electrons2) Place atoms<ul style="list-style-type: none">• Least electronegative atom in the center• Hydrogen is always on the outside3) Bond all atoms with a single bond4) Give all atoms a full shell5) Re-count the # of e- used6) Used too few? Give them to the central atom7) Used too many? Try double or triple bonds to fix it!<ul style="list-style-type: none">• Take a pair away from two neighboring atoms• Put a pair between them to form the extra bond• "Take two away, put one back in between" <p>✓ Correct number of valence electrons used ??? ✓ Is each atom "happy" now ???</p>	<p>Some elements have a tendency to break the octet rule. This is a list of the common ones that break the rule. Please know that you should always draw the best structure possible, and sometimes that means something will break the octet rule even if it isn't listed here. You can only do the best you can do!</p> <ul style="list-style-type: none">▶ H - 2▶ Li - 2▶ Be - 4▶ B - 6▶ P - 10▶ S - 12

Part A

https://youtu.be/on_-k2-jvns

Part B

<https://youtu.be/HeX66BXt2-w>

Part C

https://youtu.be/KBP_sUPYK3E

Write the formula for the molecular compounds below, count the number of valence electrons the molecule has, and then draw a valid Lewis Structure. Make sure to use lines for bonds, and leave lone pairs as dots.

<p>1) Phosphorus trihydride</p> <p><u>Formula</u> <u># of ve-</u></p> <p>PH₃ 8</p>	<p>2) Boron trifluoride</p> <p><u>Formula</u> <u># of ve-</u></p>	<p>3) Sulfur dioxide</p> <p><u>Formula</u> <u># of ve-</u></p>
<p>4) Sulfur trioxide</p> <p><u>Formula</u> <u># of ve-</u></p>	<p>5) Ammonia</p> <p><u>Formula</u> <u># of ve-</u></p>	<p>6) Dinitrogen pentoxide</p> <p><u>Formula</u> <u># of ve-</u></p>
<p>7) Carbon disulfide</p> <p><u>Formula</u> <u># of ve-</u></p>	<p>8) Carbon dioxide</p> <p><u>Formula</u> <u># of ve-</u></p>	<p>9) Phosphorus pentachloride</p> <p><u>Formula</u> <u># of ve-</u></p>
<p>10) Dinitrogen trioxide</p> <p><u>Formula</u> <u># of ve-</u></p>	<p>11) Boron trichloride</p> <p><u>Formula</u> <u># of ve-</u></p>	<p>12) Carbon monoxide</p> <p><u>Formula</u> <u># of ve-</u></p>

Strong and Weak Acids and Bases

Write the name. Write if it is a strong or weak acid. Write how it would be written in a 1.0 M solution. List of strong acids and bases is on the back of your common ion list. They need to get memorized ASAP!

S/W A/B List <https://tinyurl.com/yd9w685k>

Quizlet: <https://tinyurl.com/yat3x6tg>

S/W A/B List

Quizlet

Acid	Name	Strong/Weak?	How Written in 1.0 M
1) HF	Hydrofluoric acid	W	HF (aq)
2) HCl	Hydrochloric acid	S	H ⁺ (aq) + Cl ⁻ (aq)
3) HBr			
4) H ₂ S			
5) HClO ₄			
6) HClO ₃			
7) HClO ₂			
8) HClO			
9) HNO ₃			
10) HNO ₂			
11) H ₂ SO ₄			
12) H ₂ SO ₃			
13) H ₂ CO ₃			
14) H ₃ PO ₄			
15) H ₂ C ₂ O ₄			
16) CH ₃ COOH			

Net Ionic Equations - Write, balance, and indicate phases. Write the molecular equation and the net ionic. You will need to use your solubility rules to decide if something is soluble and therefore aqueous and breaks into ions, or if it is insoluble so it is a solid and does not get broken apart into ions. The solubility rules are linked on the front page of this worksheet!

1) Solutions of zinc sulfate and sodium phosphate are mixed
<i>Molecular:</i> $3\text{ZnSO}_4(\text{aq}) + 2\text{Na}_3\text{PO}_4(\text{aq}) \rightarrow \text{Zn}_3(\text{PO}_4)_2(\text{s}) + 3\text{Na}_2\text{SO}_4(\text{aq})$
<i>Net Ionic:</i> $3\text{Zn}^{2+}(\text{aq}) + 2(\text{PO}_4)^{3-}(\text{aq}) \rightarrow \text{Zn}_3(\text{PO}_4)_2(\text{s})$
2) A solution of sodium sulfide is added to a solution of zinc nitrate
<i>Molecular:</i>
<i>Net Ionic:</i>
3) Solutions of silver nitrate and lithium bromide are mixed
<i>Molecular:</i>
<i>Net Ionic:</i>
4) Solutions of sodium iodide and lead (II) nitrate are mixed
<i>Molecular:</i>
<i>Net Ionic:</i>
5) Solutions of silver nitrate and sodium chromate are mixed
<i>Molecular:</i>
<i>Net Ionic:</i>
6) A solution of copper (II) sulfate is added to a solution of sodium hydroxide.
<i>Molecular:</i>
<i>Net Ionic:</i>
7) Sodium hydroxide solution is added to a solution of magnesium nitrate.
<i>Molecular:</i>
<i>Net Ionic:</i>

8) Solutions of potassium phosphate and zinc nitrate are mixed.

Molecular:

Net Ionic:

9) Solutions of manganese (II) sulfate and ammonium sulfide are mixed.

Molecular:

Net Ionic:

10) A solution of nickel (II) chloride is added to a solution of sodium sulfide.

Molecular:

Net Ionic:

Extras to Practice – You can (and will) be assigned some of these occasionally. They can (and will) show up on homework, pop quizzes, quizzes, tests, and the AP test.

11) Solutions of cobalt (II) nitrate and sodium hydroxide are mixed.

12) A solution of copper (II) chloride is added to a solution of sodium sulfide.

13) Solutions of strontium nitrate and sodium sulfate are mixed.

14) Solutions of sodium chromate and lead (II) nitrate are mixed.

15) A solution of sodium iodide is added to a solution of lead (II) acetate.

16) Solutions of lead (II) nitrate and potassium sulfate are mixed.

17) A solution of sodium phosphate is mixed with a solution of calcium acetate.

18) A solution of sodium phosphate is added to a solution of aluminum nitrate.

19) Solutions of silver nitrate and sodium chloride are combined.

20) A solution of calcium hydroxide and sodium chloride are combined.

Extra Review

Everyone has had a summer off from chemistry, sometimes even more if you skipped a year between Honors Chem and AP Chem. Everyone can benefit from some extra review. Only you know which topics were hardest for you last year – spend some time looking through the materials on the Honors Chemistry Tab of my class website. <http://mychemistryclass.net/honorschem.html>

1st Semester Chapters

1. Chemistry Basics
2. Atomic Structure
3. Electrons
4. Periodic Table
5. Bonding and Structure
6. Reactions
7. Stoichiometry

2nd Semester Chapters

8. Advanced Chemical Ratios
9. Gas Laws
10. Thermochemistry
11. Solutions
12. Kinetics
13. Equilibrium
14. Acids and Bases

You can even watch all my Honors Chem lecture videos on my YouTube Channel!
