Seat#:

**Required Sections:** (Refer to R-5 for guidelines and requirements. Make note of any specific changes given by your teacher in class)

**Prelab:** All written in your lab notebook – Answer Pre-Lab Questions, Materials, Reagent Table, Procedures,

**During Lab:** Data Tables are part of the actual Lab Handout this time!

**Post-lab:** - The written equations on the actual Lab Handout are the post lab questions this time!

## Introduction

Most reactions fall into one of five categories that we have discussed in class. In this lab, you will be completing several different types of reactions. For EACH reaction you investigate, you must predict the products, identify the type of reaction, and write both the word equation AND the balanced formula equation.

## Pre-Lab Questions

1. What are the five main categories of reactions?
2. Describe how to predict the products for each type of reaction.

Reaction #1	
<b>Materials</b> <ul style="list-style-type: none"><li>• CuSO<sub>4</sub></li><li>• Large paperclip</li><li>• Test tube</li></ul>	<b>Procedure</b> <ol style="list-style-type: none"><li>1) Add a little CuSO<sub>4</sub> to a test tube. CuSO<sub>4</sub> is toxic. Handle it with care!</li><li>2) Open a paper clip (source of Fe, iron) and hang it over the edge of a test tube reaching ~ 2cm into the CuSO<sub>4</sub>. Observe the paper clip for 5 to 8 minutes.</li><li>3) Remove the paper clip and place it on a piece of white scratch paper. When finished, throw out the paper clip and recycle the copper sulfate in the container at the front desk.</li></ol>
<b>Observations</b>	
<b>Type of Reaction</b>	
<b>Word Equation</b>	
<b>Balanced Equation with phases included</b>	
<b>Net Ionic Equation (<i>if applicable</i>)</b>
