

Name: _____

Period: _____

Seat#: _____

Directions: Show all work for ANY math problem. Include ALL units. Some answers provided at the end of the question. The answers are underlined.

- 1) 95.6 g of menthol (molar mass = 156 g/mol) are burned in oxygen gas to give 269 g CO₂ and 110 g H₂O. What is menthol's empirical formula if it contains only C, H and O? Empirical formula of C₁₀H₂₀O

- 2) 0.487 grams of quinine (molar mass = 324 g/mol) is combusted and found to produce 1.321 g CO₂, 0.325 g H₂O and 0.0421 g nitrogen. Determine the empirical and molecular formulas. Empirical formula is C₁₀H₁₂NO, molecular formula is C₂₀H₂₄N₂O₂

Adv. Chemical Ratios – Combustion Analysis

3) A 1.50 g sample of hydrocarbon undergoes complete combustion to produce 4.40 g of CO_2 and 2.70 g of H_2O . What is the empirical formula of this compound? In addition, its molecular weight has been determined to be about 78. What is the molecular formula? CH_3 , C_6H_{15}

4) A 0.250 g sample of hydrocarbon undergoes complete combustion to produce 0.845 g of CO_2 and 0.173 g of H_2O . What is the empirical formula of this compound? CH

- 5) A 0.2500 g sample of a compound known to contain carbon, hydrogen and oxygen undergoes complete combustion to produce 0.3664 g of CO_2 and 0.1500 g of H_2O . What is the empirical formula of this compound? CH_2O
- 6) Caffeine, a stimulant found in coffee, tea, and certain soft drinks, contains C, H, O, and N. Combustion of 1.000 mg of caffeine produces 1.813 mg CO_2 , 0.4639 mg H_2O , and 0.2885 mg N_2 . What is the empirical formula for caffeine? Estimate the molar mass of caffeine, which lies between 150 and 200 g/mol. Show work to justify your estimation. $\text{C}_4\text{H}_5\text{N}_2\text{O}$
